Integration of Warning Mechanism into WebMaDa for Abnormal Node Behavior

• Inform network owner
  • when strange measurements are received → fire in the room
  • When unexpected high packet loss occurs → low battery

• ToDo in WebMaDa
  • Analysis of received data
  • Design and implement mechanism to set thresholds for forcing a warning
  • Design and implement mechanisms informing owner
    • Per Email and within frontend (e.g., marked node, alarm notification when logging in)
  • Extending logging system
  • Integration into filtering solution
